CALPROTECTIN, STOOL

Collected on Aug 15, 2025 7:15 AM

If you have questions or concerns regarding your test results, contact the clinician who ordered the test. 

Amy McCarthy, NP 08/22/2025, 7:10 AM

Hi Jennifer,

This is Amy McCarthy, the Nurse Practitioner working with Dr. Lorilla. Thank you for completing your recent lab work. The results demonstrate the following:

- 1. Calprotectin: normal level in the stool. Please plan to follow up with GI regarding the blood in the stool test.

Best,
--Amy McCarthy, NP

Results

Calprotectin, Stool

Value
11

Note
Reference Range:
<50 Normal
50-120 Borderline
>120 Elevated

Calprotectin in Crohn's disease and ulcerative colitis can be five to several thousand times above the reference population (50 mcg/g or less). Levels are usually 50 mcg/g or less in healthy patients and with irritable bowel syndrome. Repeat testing in 4-6 weeks is suggested for borderline values.

Specimens: Stool (Stool)

Result date: Aug 22, 2025 12:26 AM

Result status: Final

Resulting lab:
