

MICRO.NUTRIENT

Driven by Science. Inspired by You.

Patient: **Pei Ru Hao, Jennifer**

Accession ID: 2602200057

Provider: Rupa Health

Due to technical difficulties, we were unable to obtain a valid test result for Magnesium. This report shows no result for this analyte. If you have any questions, please call Client Services at 800-227-5227.

The reported results were determined on a blood specimen received at SpectraCell Laboratories two days after collection. Test results are determined by the proliferative response of lymphocytes following mitogen stimulation. Optimal proliferation characteristics are generally associated with specimens received and tested within 24 hours of collection.

Order Status: **Complete**

Welcome to your Micronutrient Profile, **Jennifer!**

Your body is unique and your story is too. Virtually all metabolic and developmental processes that take place in the body require micronutrients and strong evidence suggests that subtle vitamin, mineral, and antioxidant deficiencies can contribute to degenerative processes. These cellular deficiencies may suggest the underlying cause of a myriad of unwanted symptoms and, if corrected, can optimize physical and mental health performance.

The SpectraCell Advantage

Superior insights, earlier interventions, customized treatment plans.

Functional

We measure the functional level and capability of nutrients present within your white blood cells, where metabolism takes place and where micronutrients do their job.

Long-term

This test measures intracellular micronutrient function over a period of 4-6 months, extending beyond static serum measurements.

Proprietary

Only SpectraCell offers the patented Spectrox® (reflects antioxidant capacity) and Immunidex (an overall measure of immune function).

What we measure:

We have measured the functional levels of 31 micronutrients, from vitamins and minerals to fatty acids and metabolites, as well as an overall measurement of antioxidant capacity and immune function to provide you with a powerful tool for optimal health, performance, and insight into any health condition. We provide your unique nutrient status in the following areas:

VITAMINS & MINERALS

Discover your body's unique vitamin and mineral requirements and the disparities that exist within your makeup.

AMINO ACIDS

Learn how well your amino acids, the building block of protein, are functioning within your cells.

ENERGY, FAT AND METABOLISM

Know how well your body is metabolizing micronutrients for energy production.

ANTIOXIDANT STATUS & IMMUNE FUNCTION

Understand your body's ability to manage oxidative stress and your immune response to infections and disease.

Results At-A-Glance

Functional Deficiencies

Abnormal	Supplementation Information *	Provider Comments
NO FUNCTIONAL DEFICIENCIES		

* The RDA (Recommended Daily Allowance) was first published in 1968 primarily for use in nutritional labeling of packaged foods. The DRI (Dietary Reference Intake), published in 1997, serves as replacements for the former RDA, although the actual values are generally within an order of magnitude, and are also primarily for use in nutritional labeling and fortification of packaged foods. In most cases, neither the RDA nor the DRI will be adequate to replete a nutrient in people who demonstrate a functional cellular deficiency of said nutrient. An evidence based approach was used to develop clinically relevant repletion recommendations, consisting of data from published studies and clinician expertise. However, the information presented is not intended nor implied to be a substitute for professional medical advice, diagnosis or treatment.

* Listed repletion information is for patients 12 and older. If the patient is under 12, please contact Spectracell Client Services for pediatric repletion information.

Spectrox®

Total Antioxidant Function

Immunidex

Total Immune Function

Total Immune Function vs Age

Deficient

Values in this range indicate a poor growth response. Cell function is compromised and likely requires nutrient repletion.

Average

Values in this range indicate an average growth response. Cell function is not yet optimal and may require nutrient repletion.

Strong

Values in the range indicate a stronger than average growth response. Cells are functioning well.

Spectrox®

Total Antioxidant Function is a measurement of overall antioxidant function. The patient's cells are oxidatively challenged and the cells' ability to resist damage is determined.

Immunidex

Total Immune Function is an indication of how well a person's T-lymphocytes are functioning by measuring their response to mitogen stimulation (ability to grow). Since lymphocyte function is widely considered a systemic measure of general health, a healthy (stronger) response is desired. A less-than-optimal response may improve with nutrient repletion.

Individual Antioxidants

Carbohydrate Metabolism

SpectroX® - Total Antioxidant Function

Total Antioxidant Function is a measurement of overall antioxidant function. The patient's cells are oxidatively challenged and the cells' ability to resist damage is determined.

Immunidex - Total Immune Function

Total Immune Function is an indication of how well a person's T-lymphocytes are functioning by measuring their response to mitogen stimulation (ability to grow). Since lymphocyte function is widely considered a systemic measure of general health, a healthy (stronger) response is desired. A less-than-optimal response may improve with nutrient repletion.

Overview of Test Methodology

Cellular Function = Performance, Not Just Potential

Lymphocyte Proliferation Assay

Routine turnaround time for the Micronutrient assay is 10-14 business days.
